

The technology is in the Seed!

We know that you can buy seed from many sources. At TMI, we want you to be aware of the technology that comes in every one of our seeds. Insect resistance, dark green color, seedling vigor and disease resistance are all jam packed into each and every tiny little seed.

While others may tell you that their seed is as good as TMI's, if you were to compare the innate features in our varieties, you would realize what a tremendous bargain comes in one of our bags of seed.

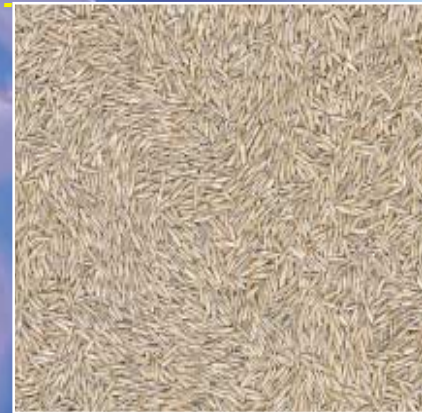

When you factor in TMI's testing and quality control programs, which exceed every State's requirements, there is really no reason to buy technology from anyone else. We just haven't figured out a better way to cram that much technology into a tinier package!

**Brown Patch Resistance -
Less Fungicides**

**Rapid Sod Production -
More Profit**

**Darker Color -
Less Fertilizer**

**Less Vertical Height -
Less Mowing**

Beauty Is More Than Skin Deep

Let's face it, the Beauty contest has been won. Varieties with dark green color are a dime a dozen. It's what lies within each and every seed that is important. But who wins the beauty contest when Powdery mildew strikes? What good is a pretty face if it is covered with rust? What about a peaches and cream complexion that turns mottled with *Poa annua*?

At TMI, we spend many years of research and development to make just one new variety commercial. And when we do, that variety has natural Disease resistance, insect resistance and spring green-up so our varieties win that beauty contest more often than not. We meticulously screen our seeds for other crop and weed contaminants to keep that picture perfect lawn that you want to sell as sod. If our competitors matched our quality standards, many wouldn't have much to sell. We want you to have sod that is more marketable more months of the year.
