

TURF THAT SURVIVES SALT

VIP3 SALT TOLERANT BLEND

Turf Type Perennial Ryegrass

Decreasing availability of fresh water sources for golf courses has increased the usage of effluent water for irrigation. Since recycled water sources are usually high in saline, TMI has developed a blend of our three highest salt tolerant varieties to meet the needs of those customers who have to irrigate overseeded turf with effluent water.

Paragon was rated one of the most salt tolerant varieties in a University of Arizona Trial. Independent studies have also shown that Manhattan4, Paragon and Pizzazz have nearly twice the survival rate to salinity as many other commercially available varieties!

2000 SALT SCREENING

Of national perennial ryegrass. Screened at ca. 17,000 ppm salinity for nine weeks. Rating taken November 28, 2000.

Variety	Survivors % alive
Manhattan 4	61%
Pizzazz	53%
Paragon	46%

PARAGON
