

Turf Type Tall Fescue

Rhambler SRP™

Rhambler SRP™

is an entirely new generation of tall fescues. The presence of rhizomes creates a self-repair potential for this species which can speed establishment, improve traffic tolerance, and increase recovery potential from damage.

With its dark color and fine texture, Rhambler SRP™ is a natural to blend with 10 percent Kentucky or Texas bluegrass. Rhambler SRP™ germ-plasm further resists Brown Patch, a disease which can be devastating to any tall fescue turf.

Tall fescue's expanded adaptation range, improved color and texture, plus its inherent drought and shade tolerance have made it the preferred turfgrass in the Midwest.

2005/2006 Average Turf Quality

Rhambler SRP	5.7
Falcon IV	5.5
Grande II	4.9
Kentucky 31	1.3
LSD	0.07
